# Acknowledgments

---

*The Little Green Data Book 2013* is based on *World Development Indicators 2013* and its online database. Defining, gathering, and disseminating international statistics is a collective effort of many people and organizations. The indicators presented in *World Development Indicators* are the fruit of decades of work at many levels, from the field workers who administer censuses and household surveys to the committees and working parties of the national and international statistical agencies that develop the nomenclature, classifications, and standards fundamental to the international statistical system. Nongovernmental organizations have also made important contributions. We are indebted to the *World Development Indicators* partners, as detailed in *World Development Indicators 2013*.

*The Little Green Data Book 2013* is the result of close collaboration between the staff of the Development Data Group of the Development Economics Vice Presidency and the Agriculture and Environmental Services Department of the Sustainable Development Vice Presidency. Liu Cui, Mahyar Eshragh-Tabary, Sonu Jain, Glenn-Marie Lange, Esther Naikal, Urvashi Narain, William Prince, and Jomo Tariku contributed to its preparation. Azita Amjadi and Alison Kwong coordinated the production of the book. Barton Matheson Willse & Worthington typeset the book. The work was carried out under the direction of Shaida Badiie and Juergen Voegelé. Staff from The World Bank's Office of the Publisher oversaw publication and dissemination of the book.

# Foreword

---

Welcome to the *Little Green Data Book 2013*. For 13 years, we have been taking the pulse of development and environment using more than 50 indicators for more than 200 countries. Today, we believe that one of the indicators—Adjusted Net Savings—is critical to the post-2015 development dialogue.

When leaders from around the world gathered in Rio de Janeiro in June 2012 for the United Nations Conference on Environment and Development (Rio +20), one of the main outcomes was to launch a process to develop Sustainable Development Goals (SDGs). These goals could define the post-2015 agenda, building on the Millennium Development Goals. Issues currently being discussed for SDGs cover the three pillars of sustainability—economic, social, and environmental.

Yet, many countries do not have the information they need on the state of their environment and natural resources—whether in terms of GDP or from other conventional indicators. Increasingly, they need a new generation of metrics to monitor sustainable development at the macroeconomic level.

One of the key indicators in the *Little Green Data Book*, Adjusted Net Savings (ANS), allows countries to do just that. Also known as genuine savings, ANS shows whether a country is on the path to sustainable development (see *box on regional Adjusted Net Saving Rate on page vi*). It monitors whether depletion of natural capital, such as minerals or forests, is compensated for by investment in other assets, such as human capital or infrastructure. A positive ANS indicates that a country is adding to its overall wealth and that economic growth is on a sustainable path. In resource-rich countries in particular, macroeconomic indicators such as ANS can be a useful complement to GDP, providing a more comprehensive lens on the long-term sustainability of economic growth.

The World Bank has linked this approach to our core mission—ending poverty and boosting shared prosperity. It also allows us to monitor our commitment to intergenerational equity so that we are not using our resources today in a way that compromises the quality of life and aspirations of our children tomorrow.

The Development Committee, a Joint Ministerial Committee of the Boards of Governors of the World Bank and the International Monetary Fund, at its April 2013 meeting discussed a new paper that defines the direction of the World Bank Group. “We have committed, working closely with our development partners, to moving beyond a reliance on GDP and promoting wealth and natural capital accounting and making progress in the development of measures of genuine savings . . .” says the Development Committee paper, *A Common Vision for the World Bank Group*.

As we move toward 2015 and the deadline for the implementation of the UN’s Millennium Development Goals approaches, we hope policy makers will find indicators like the ANS useful for development and implementation of their post-2015 development agendas.

# Foreword

## Box 1. Adjusted net savings paths diverge

Source: World Bank, *World Development Indicators* 2013.

Savings lay the basis for building wealth and future growth. Adjusted net savings (ANS) measures the real difference between production and consumption, taking into account investments in human capital, depreciation of fixed capital, depletion of natural resources, and damages caused by pollution. The East Asia and Pacific region has maintained the highest savings rate among developing regions since 1980, driven largely by China. South Asia has displayed consistently strong savings rates, fluctuating between 10 and 20 percent since 1985, with India dominating the aggregate figure. Over the past decades, Latin America's rates have remained fairly constant, while Eastern Europe and Central Asia are more variable. In Sub-Saharan Africa, ANS has not only declined in recent years but dipped below zero, suggesting unsustainable development and declining wealth.

The *Little Green Data Book* is a result of close collaboration between the World Bank's Development Data Group within the Development Economics Vice Presidency and the Agriculture and Environmental Services Department of the Sustainable Development Vice Presidency. We welcome suggestions on how to improve future editions and make them even more useful.

# Data notes

---

The data in this book are for the most recent year available as noted in the glossary.

- Growth rates are calculated as annual averages and represented as percentages.
- Regional aggregates include data for low- and middle-income economies only.
- Figures in italics indicate data for years or periods other than those specified in the glossary.

Symbols used:

- .. indicates that data are not available or that aggregates cannot be calculated because of missing data.
- 0 or 0.0 indicates zero or small enough that the number would round to zero at the displayed number of decimal places.
- \$ indicates current U.S. dollars.

Lettered notes on country tables can be found in the notes page. Data are shown for economies with populations greater than 30,000 or for smaller economies if they are members of the World Bank. The term *country* (used interchangeably with *economy*) does not imply political independence or official recognition by the World Bank but refers to any economy for which the authorities report separate social or economic statistics.

The selection of indicators in these pages includes some of those being used to monitor progress toward the Millennium Development Goals. For more information about the eight goals—halving poverty and increasing well-being by 2015—please see the other books in the *World Development Indicators 2013* family of products at [data.worldbank.org/products/data-books](http://data.worldbank.org/products/data-books).

# Regional tables

---

The country composition of regions is based on the World Bank's analytical regions and may differ from common geographic usage.

## **East Asia and Pacific**

American Samoa, Cambodia, China, Fiji, Indonesia, Kiribati, Democratic People's Republic of Korea, Lao People's Democratic Republic, Malaysia, Marshall Islands, Federated States of Micronesia, Mongolia, Myanmar, Palau, Papua New Guinea, the Philippines, Samoa, Solomon Islands, Thailand, Timor-Leste, Tonga, Tuvalu, Vanuatu, Vietnam.

## **Europe and Central Asia**

Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Georgia, Kazakhstan, Kosovo, Kyrgyz Republic, Latvia, Lithuania, Former Yugoslav Republic of Macedonia, Moldova, Montenegro, Romania, Russian Federation, Serbia, Tajikistan, Turkey, Turkmenistan, Ukraine, Uzbekistan.

## **Latin America and the Caribbean**

Antigua and Barbuda, Argentina, Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, Ecuador, El Salvador, Grenada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, St. Lucia, St. Vincent and the Grenadines, Suriname, Uruguay, República Bolivariana de Venezuela.

## **Middle East and North Africa**

Algeria, Djibouti, Arab Republic of Egypt, Islamic Republic of Iran, Iraq, Jordan, Lebanon, Libya, Morocco, Syrian Arab Republic, Tunisia, West Bank and Gaza, Republic of Yemen.

## **South Asia**

Afghanistan, Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan, Sri Lanka.

## **Sub-Saharan Africa**

Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, the Democratic Republic of Congo, Republic of Congo, Côte d'Ivoire, Eritrea, Ethiopia, Gabon, The Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mauritius, Mozambique, Namibia, Niger, Nigeria, Rwanda, São Tomé and Príncipe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, South Sudan, Sudan, Swaziland, Tanzania, Togo, Uganda, Zambia, Zimbabwe.

## National accounting aggregates—savings, depletion and degradation

|                                         |      |
|-----------------------------------------|------|
| Gross savings (% of GNI)                | 49.3 |
| Consumption of fixed capital (% of GNI) | 11.0 |
| Education expenditure (% of GNI)        | 2.1  |
| Energy depletion (% of GNI)             | 4.3  |
| Mineral depletion (% of GNI)            | 1.7  |
| Net forest depletion (% of GNI)         | 0.0  |
| CO <sub>2</sub> damage (% of GNI)       | 0.9  |
| Particulate emissions damage (% of GNI) | 1.1  |
| Adjusted net savings (% of GNI)         | 32.2 |

# Europe & Central Asia

Population (millions) **408.1** Land area (1,000 sq. km) **22,748** GDP (\$ billions) **3,634.9**

|                                                     |       |
|-----------------------------------------------------|-------|
| GNI per capita, <i>World Bank Atlas</i> method (\$) | 7,734 |
| Adjusted net national income per capita (\$)        | 6,652 |
| Urban population (% of total)                       | 64.7  |
| Urban population growth (avg. annual %, 1990–2011)  | 0.3   |

## Agriculture

|                                                             |       |
|-------------------------------------------------------------|-------|
| Agricultural land (% land area)                             | 28    |
| Agricultural irrigated land (% of total agricultural land)  | ..    |
| Agricultural productivity, value added per worker (2000 \$) | 3,374 |
| Cereal yield (kg per hectare)                               | 2,740 |

## Forests and biodiversity

|                                                    |      |
|----------------------------------------------------|------|
| Forest area (% land area)                          | 38.7 |
| Deforestation (avg. annual %, 2000–2010)           | 0.0  |
| Terrestrial protected areas (% of total land area) | 7.5  |
| Threatened species, mammals                        |      |
| Threatened species, birds                          |      |
| Threatened species, fish                           |      |
| Threatened species, higher plants                  |      |

## Oceans

|                                                     |       |
|-----------------------------------------------------|-------|
| Total fisheries production (thousand metric tons)   | 5,790 |
| Capture fisheries growth (avg. annual %, 1990–2011) | -2.9  |
| Aquaculture growth (avg. annual %, 1990–2011)       | -0.5  |
| Marine protected areas (% of territorial waters)    | 10.4  |
| Coral reef area (sq. km)                            | ..    |
| Mangroves area (sq. km)                             | ..    |

## Energy and emissions

|                                                      |       |
|------------------------------------------------------|-------|
| Energy use per capita (kg oil equivalent)            | 3,015 |
| Energy from biomass products and waste (% of total)  | 2.0   |
| Electric power consumption per capita (kWh)          | 4,059 |
| Electricity generated using fossil fuel (% of total) | 65.4  |
| Electricity generated by hydropower (% of total)     | 18.8  |
| CO <sub>2</sub> emissions per capita (metric tons)   | 7.1   |

## Water and sanitation

|                                                         |        |
|---------------------------------------------------------|--------|
| Internal freshwater resources per capita (cu. m)        | 12,498 |
| Total freshwater withdrawal (% of internal resources)   | 6.3    |
| Agriculture (% of total freshwater withdrawal)          | 60     |
| Access to improved water source (% of total population) | 96     |
| Rural (% of rural population)                           | 91     |
| Urban (% of urban population)                           | 99     |
| Access to improved sanitation (% of total population)   | 84     |
| Rural (% of rural population)                           | 81     |
| Urban (% of urban population)                           | 87     |

## Environment and health

|                                                             |    |
|-------------------------------------------------------------|----|
| Particulate matter (urban-pop.-weighted avg., µg/cu. m)     | 21 |
| Acute resp. infection prevalence (% of children under five) | .. |
| Diarrhea prevalence (% of children under five)              | .. |
| Under-five mortality rate (per 1,000 live births)           | 21 |

## National accounting aggregates—savings, depletion and degradation

|                                         |      |
|-----------------------------------------|------|
| Gross savings (% of GNI)                | 26.1 |
| Consumption of fixed capital (% of GNI) | 12.3 |
| Education expenditure (% of GNI)        | 3.6  |
| Energy depletion (% of GNI)             | 9.3  |
| Mineral depletion (% of GNI)            | 0.8  |
| Net forest depletion (% of GNI)         | 0.0  |

| Particulate emissions damage (% of GNI) | 0.4  |
| Adjusted net savings (% of GNI)         | -1.2 |

# Income group tables

---

For operational and analytical purposes the World Bank's main criterion for classifying economies is gross national income (GNI) per capita. Each economy in *The Little Data Book* is classified as low income, middle income, or high income. Low- and middle-income economies are sometimes referred to as developing economies. The use of the term is convenient; it is not intended to imply that all economies in the group are experiencing similar development or that other economies have reached a preferred or final stage of development. Classification by income does not necessarily reflect development status. Note: Classifications are fixed during the World Bank's fiscal year (ending on June 30), thus countries remain in the categories in which they are classified irrespective of any revisions to their per capita income data.

**Low-income** economies are those with a GNI per capita of \$1,025 or less in 2011.

**Middle-income** economies are those with a GNI per capita of more than \$1,025 but less than \$12,476. Lower-middle-income and upper-middle-income economies are separated at a GNI per capita of \$4,036.

**High-income** economies are those with a GNI per capita of \$12,476 or more.

**Euro area** includes the member states of the Economic and Monetary Union of the European Union that have adopted the euro as their currency: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, Netherlands, Portugal, Slovak Republic, Slovenia, and Spain.

# Low income

Population (millions) **816.8** Land area (1,000 sq. km) **16,079** GDP (\$ billions) **475.8**

|                                                     |      |
|-----------------------------------------------------|------|
| GNI per capita, <i>World Bank Atlas</i> method (\$) | 571  |
| Adjusted net national income per capita (\$)        | 521  |
| Urban population (% of total)                       | 28.0 |
| Urban population growth (avg. annual %, 1990–2011)  | 3.5  |

## Agriculture

|                                                             |       |
|-------------------------------------------------------------|-------|
| Agricultural land (% land area)                             | 39    |
| Agricultural irrigated land (% of total agricultural land)  | ..    |
| Agricultural productivity, value added per worker (2000 \$) | 308   |
| Cereal yield (kg per hectare)                               | 2,034 |

## Forests and biodiversity

|                                                    |      |
|----------------------------------------------------|------|
| Forest area (% land area)                          | 25.7 |
| Deforestation (avg. annual %, 2000–2010)           | 0.6  |
| Terrestrial protected areas (% of total land area) | 10.0 |
| Threatened species, mammals                        |      |
| Threatened species, birds                          |      |
| Threatened species, fish                           |      |
| Threatened species, higher plants                  |      |

## Oceans

|                                                     |        |
|-----------------------------------------------------|--------|
| Total fisheries production (thousand metric tons)   | 11,563 |
| Capture fisheries growth (avg. annual %, 1990–2011) | 4.0    |
| Aquaculture growth (avg. annual %, 1990–2011)       | 4.9    |
| Marine protected areas (% of territorial waters)    | ..     |
| Coral reef area (sq. km)                            | 15,120 |
| Mangroves area (sq. km)                             | 25,818 |

## Energy and emissions

|                                                      |      |
|------------------------------------------------------|------|
| Energy use per capita (kg oil equivalent)            | 363  |
| Energy from biomass products and waste (% of total)  | 66.2 |
| Electric power consumption per capita (kWh)          | 242  |
| Electricity generated using fossil fuel (% of total) | 32.0 |
| Electricity generated by hydropower (% of total)     | 45.3 |
| CO <sub>2</sub> emissions per capita (metric tons)   | 0.3  |

## Water and sanitation

|                                                         |       |
|---------------------------------------------------------|-------|
| Internal freshwater resources per capita (cu. m)        | 5,125 |
| Total freshwater withdrawal (% of internal resources)   | 4.5   |
| Agriculture (% of total freshwater withdrawal)          | 90    |
| Access to improved water source (% of total population) | 65    |
| Rural (% of rural population)                           | 57    |
| Urban (% of urban population)                           | 86    |
| Access to improved sanitation (% of total population)   | 37    |
| Rural (% of rural population)                           | 32    |

| Particulate emissions damage (% of GNI) | 0.1  |
| Adjusted net savings (% of GNI)         | 10.3 |

# Country tables

---

## **China**

Unless otherwise noted, data for China do not include data for Hong Kong SAR, China; Macao SAR, China; or Taiwan, China.

## **Cyprus**

GNI and GDP data and data calculated using GNI and GDP refer to the area controlled by the government of the Republic of Cyprus.

## **France**

Data for Mayotte, to which a reference appeared in previous editions, are included in data for France.

## **Georgia**

GNI, GDP and population data and data calculated using GNI, GDP and population exclude Abkhazia and South Ossetia.

## **Kosovo, Montenegro, and Serbia**

Data for each country are shown separately where available. However, some indicators for Serbia prior to 2006 include data for Montenegro; these data are noted in the tables. Moreover, data for most indicators for Serbia from 1999 onward exclude data for Kosovo, which in 1999 became a territory under international administration pursuant to UN Security Council Resolution 1244 (1999). Kosovo became a member of the World Bank on June 29, 2009, and its data are shown where available.

## **Moldova**

GNI, GDP and population data and data calculated using GNI, GDP and population exclude Transnistria.

## **Morocco**

GNI and GDP data and data calculated using GNI and GDP include Former Spanish Sahara.

## **South Sudan and Sudan**

South Sudan declared its independence on July 9, 2011. Data are shown separately for South Sudan where available. However, data reported for Sudan include South Sudan unless otherwise noted.

## **Tanzania**

GNI and GDP data and data calculated using GNI and GDP refer to mainland Tanzania only.

For more information, see *World Development Indicators 2013* or data.worldbank.org.

# Afghanistan

# Notes

---

- a. Refers to area free from ice.
- b. Excludes South Sudan.
- c. Excludes South Sudan after July 9, 2011

# Glossary

---

**Access to improved sanitation** is the percentage of population with adequate access to excreta disposal facilities (private or shared, but not public) that can effectively prevent human, animal, and insect contact with excreta. Improved facilities range from simple but protected pit latrines to flush toilets with a sewerage connection. To be effective, facilities must be correctly constructed and properly maintained. (World Health Organization; data are for 2010)

**Access to improved water source** is the percentage of the population with reasonable access to an adequate amount of water from an improved source, such as piped water into a dwelling, plot, or yard; public tap or standpipe; tube-well or borehole; protected dug well or spring; or rainwater collection. Unimproved sources include an unprotected dug well or spring, cart with small tank or drum, bottled water, and tanker trucks. Reasonable access to an adequate amount means the availability of at least 20 liters a person a day from a source within 1 kilometer of the dwelling. (World Health Organization; data are for 2010)

**Acute respiratory infection prevalence** is the percentage of children under age five with acute respiratory infection in the two weeks prior to the survey. (United Nations Children's Fund; data are for the most recent year available during 2005–10)

**Adjusted net national income** equals gross national income minus consumption of fixed capital, energy depletion, mineral depletion, and net forest depletion. (World Bank; data are for 2011)

**Adjusted net savings** equal gross savings minus consumption of fixed capital, plus education expenditures, minus energy depletion, mineral depletion, net forest depletion, and particulate emissions and carbon dioxide damage. (World Bank; data are for 2011)

**Agricultural irrigated land** refers to agricultural areas purposely provided with water, including land irrigated by controlled flooding. (Food and Agriculture Organization; data are for 2011)

**Agricultural land** is arable land, land under permanent crops, and permanent pastures. Arable land includes land defined by the Food and Agriculture Organization of the United Nations as land under temporary crops (double-cropped areas are counted once), temporary meadows for mowing or for pasture, land under market or kitchen gardens, and land temporarily fallow. Land abandoned as a result of shifting cultivation is excluded. Land under permanent crops is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines but excludes land under trees grown for wood or timber. Permanent pasture is land used for five or more years for forage, including natural and cultivated crops. (Food and Agriculture Organization; data are for 2011)

**Agricultural productivity** is the ratio of agricultural value added, measured in 2000 U.S. dollars, to the number of workers in agriculture. Agricultural

# Glossary

---

productivity is measured by value added per unit of input. Agricultural value added includes that from forestry and fishing. Thus interpretations of land productivity should be made with caution. (Food and Agriculture Organization and World Bank; data are for 2011)

**Aquaculture growth** is the exponential change in aquaculture fisheries production for the period indicated. Aquaculture is understood to mean the farming of aquatic organisms including fish, molluscs, crustaceans, and aquatic plants. Aquaculture production specifically refers to output from aquaculture activities, which are designated for final harvest for consumption. (Food and Agriculture Organization; data are for 1990–2011)

**Capture fisheries growth** is the exponential change in capture fisheries production for the period indicated. Capture fisheries production contains the volume of fish catches landed by a country for all commercial, industrial, recreational, and subsistence purposes. (Food and Agriculture Organization; data are for 1990–2011)

**Carbon dioxide (CO<sub>2</sub>) damage** is estimated at \$20 per ton of carbon (the unit damage in 1995 U.S. dollars) times the number of tons of carbon emitted. (World Bank estimates; data are for 2011)

**Carbon dioxide (CO<sub>2</sub>) emissions per capita** are carbon dioxide emissions divided by midyear population. (Carbon Dioxide Information Analysis Center, World Bank, and United Nations; data are for 2009)

**Cereal yield**, measured as kilograms per hectare of harvested land, includes wheat, rice, maize, barley, oats, rye, millet, sorghum, buckwheat, and mixed grains. Production data on cereals relate to crops harvested for dry grain only. Cereal crops harvested for hay or harvested green for food, feed, or silage and those used for grazing are excluded. The FAO allocates production data to the calendar year in which the bulk of the harvest took place. Most of a crop harvested near the end of a year will be used in the following year. (Food and Agriculture Organization; data are for 2011)

**Consumption of fixed capital** is the replacement value of capital used up in the process of production. (United Nations; data are extrapolated to 2011 from the most recent year available)

**Coral reef area** is a country's area of coral reefs, which are shallow marine habitats defined both by a physical structure (corals) and by the organisms found on them. (See *The World Atlas of Coral Reefs* (2001), UNEP-World Conservation Monitoring Centre)

**Deforestation** is the permanent conversion of natural forest area to other uses, including shifting cultivation, permanent agriculture, ranching, settlements, and infrastructure development. Deforested areas do not include areas logged but intended for regeneration or areas degraded by fuel-wood gathering, acid precipitation, or forest fires. Negative numbers

indicate an increase in forest areas. (Food and Agriculture Organization; data are for 2000–2010)

**Diarrhea prevalence** is the percentage of children under age five who had diarrhea in the two weeks prior to the survey. (United Nations Children's Fund; data are for the most recent year available during 2005–10)

**Education expenditure** is public current operating expenditures in education, including wages and salaries and excluding capital investments in buildings and equipment. (United Nations; data are extrapolated to 2011 from the most recent year available)

**Electric power consumption per capita** is the production of power plants and combined heat and power plants, minus transmission, distribution, and transformation losses and own use by heat and power plants plus imports minus exports divided by midyear population. (International Energy Agency; data are for 2010)

**Electricity generated by hydropower** is use of hydropower as a percentage of total inputs to the generation of electricity. (International Energy Agency; data are for 2010)

**Electricity generated using fossil fuel** is use of coal, oil, and gas as a percentage of total inputs to the generation of electricity. (International Energy Agency; data are for 2010)

**Energy depletion** is the ratio of the value of the stock of energy resources to the remaining reserve lifetime (capped at 25 years). It covers crude oil, natural gas, and coal. (See World Bank 2011 for details; data are for 2011)

**Energy from biomass products and waste** is energy from solid biomass, liquid biomass, biogas, industrial waste, and municipal waste as a percentage of total energy use. (International Energy Agency; data are for 2010)

**Energy use per capita** refers to apparent consumption, which is equal to indigenous production plus imports and stock changes, minus exports and fuels supplied to ships and aircraft engaged in international transport. (International Energy Agency; data are for 2010)

**Fisheries production, total**, contains the volume of aquatic species caught by a country for all commercial, industrial, recreational, and subsistence purposes. The harvest from mariculture, aquaculture, and other types of fish farming is also included. (Food and Agriculture Organization; data are for 2011)

**Forest area** is land under natural or planted stands of trees, whether productive or not. (Food and Agriculture Organization; data are for 2011)

**Freshwater withdrawal, agriculture**, is withdrawals for irrigation and livestock production as a percentage of total freshwater withdrawal. (World Resources Institute; data are for various years; for details see *World Development Indicators 2013, Primary data documentation*.)

# Glossary

---

**Freshwater withdrawal, total**, is total water withdrawal, excluding evaporation losses from storage basins and including water from desalination plants in countries where they are a significant source. Withdrawals can exceed 100 percent of internal renewable resources because river flows from other countries are not included, because extraction from nonrenewable aquifers or desalination plants is considerable, or because there is significant water reuse. (Food and Agriculture Organization and World Resources Institute; data are for various years; for details see *World Development Indicators 2013, Primary data documentation*.)

**GDP** is gross domestic product and measures the total output of goods and services for final use occurring within the domestic territory of a given country, regardless of the allocation to domestic and foreign claims. GDP at purchaser values (market prices) is the sum of gross value added by all resident and nonresident producers in the economy plus any taxes and minus any subsidies not included in the value of the products. It is calculated without deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. (World Bank, Organization for Economic Co-operation and Development, and United Nations; data are for 2011)

**GNI** is gross domestic product plus net receipts of primary income (employee compensation and property income) from abroad. GNI per capita is in current U.S. dollars, converted using the *World Bank Atlas* method (see *World Development Indicators 2013, Statistical methods*). (World Bank, Organization for Economic Co-operation and Development, and United Nations; data are for 2011)

**GNI per capita** is gross national income (GNI) divided by midyear population.

**Gross savings** are calculated as gross national income less total consumption, plus net transfers. (World Bank and Organization for Economic Co-operation and Development; data are for 2011)

**Internal freshwater resources per capita** are internal renewable resources, which include flows of rivers and groundwater from rainfall in the country but excludes river flows from other countries, divided by midyear population. (Refers to data reported to the Food and Agriculture Organization as of 2011)

**Land area** is a country's total land area, excluding area under inland water bodies, national claims to continental shelf, and exclusive economic zones. In most cases the definition of inland water bodies includes major rivers and lakes. (Food and Agriculture Organization; data are for 2011)

**Mangroves area** is a country's total area of mangroves, which are plants of a variety of different species, including trees, shrubs, palms, and ferns, that grow in the tropics and subtropics in saline inter-tidal coastal habitats, such as estuaries and shorelines. (See *The World Atlas of Mangroves* (2010), International Society for Mangrove Ecosystems, The Nature Conservancy, Food and Agriculture Organization, UNEP-World Conservation Monitoring Centre)

**Marine protected areas** are areas of intertidal or subtidal terrain—and overlying water and associated flora and fauna and historical and cultural features—that have been reserved by law or other effective means to protect part or all of the enclosed environment. (United Nations Environmental Program and the World Conservation Monitoring Centre, as compiled by the World Resources Institute; data are for 2010)

**Mineral depletion** is the ratio of the value of the stock of mineral resources to the remaining reserve lifetime (capped at 25 years). It covers bauxite, copper, iron, lead, nickel, phosphate, tin, gold, silver, and zinc. (See World Bank 2011 for details; data are for 2011)

**Net forest depletion** is the product of unit resource rents and the excess of round-wood harvest over natural growth. If growth exceeds harvest, this figure is zero. (Food and Agriculture Organization and World Bank estimates of natural growth; data are for 2011)

**Particulate emissions damage** is calculated as the willingness to pay to reduce the risk of illness and death attributable to particulate emissions. (World Bank estimates; data are for 2010)

**Particulate matter** is fine suspended particulates of less than 10 microns in diameter that are capable of penetrating deep into the respiratory tract and causing damage. The indicator is the population-weighted average of all cities in the country with a population greater than 100,000. (World Bank estimates; data are for 2010)

**Population** includes all residents who are present regardless of legal status or citizenship except for refugees not permanently settled in the country of asylum, who are generally considered part of the population of their country of origin. (United Nations; data are midyear estimates for 2011)

**Terrestrial protected areas** are totally or partially protected areas of at least 1,000 hectares that are designated as national parks, natural monuments, nature reserves, or wildlife sanctuaries; protected landscapes and seascapes; and scientific reserves. It includes World Conservation Union–protected area categories I–VI. (United Nations Environmental Program and the World Conservation Monitoring Centre, as compiled by the World Resources Institute; data are for 2010)

**Threatened species, birds**, are the number of species of birds classified by the International Union for Conservation of Nature (IUCN) as endangered, vulnerable, rare, indeterminate, out of danger, or insufficiently known. Birds are listed for countries included within their breeding or wintering ranges. (World Conservation Monitoring Centre and IUCN; data are for 2012)

**Threatened species, fish**, are the number of species of fish—cold-blooded aquatic vertebrates of the superclass Pisces—classified by the IUCN as endangered, vulnerable, rare, indeterminate, out of danger, or insufficiently known. (World Conservation Monitoring Centre and IUCN; data are for 2012)

# Glossary

---

**Threatened species, higher plants**, are the number of native vascular plant species classified by the IUCN as endangered, vulnerable, rare, indeterminate, out of danger, or insufficiently known. (World Conservation Monitoring Centre and IUCN; data are for 2012)

**Threatened species, mammals**, are the number of species of mammals—excluding whales and porpoises—classified by the IUCN as endangered, vulnerable, rare, indeterminate, out of danger, or insufficiently known. (World Conservation Monitoring Centre and IUCN; data are for 2012)

**Under-five mortality rate** is the probability that a newborn baby will die before reaching age five if subject to current age-specific mortality rates. (United Nations and United Nations Children's Fund; data are for 2011)

**Urban population** is the share of the midyear population living in areas defined as urban in each country. (United Nations; data are for 2011)

**Urban population growth** is the exponential change in urban population for the period indicated. (United Nations; data are for 1990–2011)
